

Fox and wild dog control

Protect your property – control foxes and wild dogs effectively in 2025/26

Join a coordinated baiting program to reduce the impact of foxes and wild dogs on your land.

How it works

Fresh meat baits are used and must be buried:

- maximum of 10 baits per km, or
- 20 baits per 100 hectares.

Your Local Land Services Biosecurity Officer will help you assess and manage any potential risks.

Take advantage of these incentives:

- subsidised supply of fresh baits
- Vertebrate Pesticide Induction Training – register now: nsw.gov.au/vpit

Are you eligible?

To participate, you must:

- follow all requirements under the Pesticide Control Order
- hold a valid chemical user accreditation or complete the VPIT course.

Incentives are available until 30 June 2026 and are available to private holdings within the Riverina Local Land Services region.

Talk to your local Biosecurity Officer today.
